

Manav Acharya

Django Developer, ROBOTICS & IOT

Dharan-11, Sunsari, Dharan • 9824370346 • acharyamanav7@gmail.com

 @ <https://github.com/Manav47699>

I am a passionate development enthusiast with a strong interest in integrating AI/ML tools and techniques alongside robotics and IoT components to solve real-world problems. I enjoy tackling complex challenges by leveraging a diverse set of technologies and tools. My primary development interests lie in building scalable and efficient applications using Django and FastAPI.

EDUCATION

Bachelors in Computer Engineering

Dharan

Purwanchal Campus, Dharan

Jan, 2026 - Present

I am currently enrolled in the Computer Engineering program at Purwanchal Campus, Dharan.

PROJECTS

Robotics AI garbage classifier.

This system uses a combination of AI, computer vision, serial communication and IoT to classify waste as plastic or paper, and automatically dispose it into the correct bin using servo motors. It's an end-to-end automation solution that merges software intelligence with hardware control.

<https://github.com/Manav47699/ROBOTICS-ai-garbage-classifier.git>

Agrinova App

AGRINOVA is an offline downloadable invasive plant species detection desktop application made with PyQt5 graphics library. It comes with a built-in CNN model, trained with over a 1000 images and with more than 5 classes.

ACHIEVEMENTS

Won 1st position on Delta0.5 robothon event, a national level techfest.

We built a line follower robot using PID algorithm which won the first place in the event.

2nd runner up in Technomorph hardware hackathon, 2025

Secured 2nd Runner-Up position at the Technomorph Hackathon, organized by the Robotics Club of Purwanchal Campus. Developed an AI-powered garbage classification system that identifies different types of waste and automatically opens the corresponding dustbin using intelligent classification and automation.
